Release 1.5-beta3 is also available in the [Debian](#) and [RPM](#) package repositories and the [Subversion repository](#).
Currently Release 1.5-beta3 is distributed from the **unstable** repositories.

Installation

Documentation for this beta release is not finished yet but is largely the same as for the previous releases. Exceptions are documented in [Installation notes for 1-5 development code](#). Note that although we have thoroughly tested this beta3 release it is not yet intended for production use.

Upgrade Notes

See [Installation notes for 1-5 development code](#) for important upgrade and installation notes.

Changes since release 1.5-beta2

- * Changes since 1.5-beta2
 - HTML5 upload support for the upcoming FireFox 13.
 - Improvements in the User interface.
 - Improved user feedback and error reporting
 - Improved server side logging.
 - Various small bug fixes and enhancements.
- * Changed features:
 - Option to securely wipe (shred) expired files in the daily cron job.
 - Separate text definitions for 'login' button and title of the landing page.
 - The configured 'Site Name' is now used on the landing page

Changes since release 1.5-beta1

- * Major changes since 1.5-beta1
 - The `./config` directory as distributed now only contains a sample `config-dist.php` file. All other templates/sample files have been moved to `./config-templates` or their contents have been merged into the `./language/*` files.
 - The supplied `config-dist.php` has been cleaned up and contains some important changes. It is recommended to create a fresh `config.php` from the supplied `config-dist.php` file and adapt that one with your local settings.
 - Two database column type changes (needs manual adjustment when upgrading).
 - Changed and consolidated language file naming scheme.
 - Added Czech, Slovenian, Italian, Spanish, Croatian and Hungarian language files.
 - Updated Dutch and Norwegian language files.
- * Major (less visible) changes since 1.5-beta1
 - Further improvements in workflow, validation/error handling and input/output pathways.
 - Minor bug fixes and enhancements.

Changes since 1.1 RELEASE

- * Major changes since 1.1/1.0.1
 - Replaced Flash User interface with a HTML-only interface
 - Dropped Gears dependency, upload of large (>2G) files now requires a modern HTML5 capable browser, other browsers are limited to 2G uploads (using a small Flash-application).
 - Added automatic language selection (English, Norwegian, Dutch)
 - Added Database Abstraction Layer (PDO) to facilitate the use

of MySQL and possibly other databases as backend.

- * Major (visible) changes since earlier 1.5.0 development builds
 - Added French and German languages (contributed by RESTENA)
 - Replaced MDB2 with PDO DB Abstraction Layer
- * Major (less visible) changes since earlier development builds
 - Input/output pathways have been simplified
 - Input/output sanitisation and validation is done
 - Much code and program flow has been cleaned up and simplified
 - We now use mostly prepared statements for database interaction
 - All pages are now W3C compliant

Known issues

This is the third beta for 1.5 and there are still some issues to be tackled in the next beta4 cycle. See http://www.assembla.com/spaces/file_sender/tickets for a current list of issues.

Support and Feedback
