## Technical design - Packaging

Version 6, last updated by [gijzelarr](#) at 2010-11-09

### debian

### changelog

A log of changes in the debian packaging of filesender, not filesender itself.

### compat

### conf/apache.conf

File copied to /etc/apache/conf.d to configure apache to serve filesender files. Is copied by postinst

**config**

Configure hook that configures the database

**control**

Contains filesender package information like name and (build) dependencies

**copyright**

Copyright file, required for debian packaging

**dirs**

Dirs to be created during packaing

**docs**

Specifies which files are documentation

**install**

Specifies which files to be copied into the package

**links**

Specifies which symlinks to be created in the package

**patches**

Directory that contains patches to be applied before packaging

**patches/dbconfig-common\_support.patch**

This patch will configure filesender to use the database settings generated by the debian database manager.

**postinst**

Script called after installation, configures database and fixes permissions, configures apache.

**postrm**

Script called after deinstallation and removes apache config.

**preinst**

Script called before installation, doesn't do anything at the moment

**prerm**

Script called before removes, removes database (if confirmed by user)

**README.Debian**

Debian package specific readme

**README.source****rules**

Build rules. uses CDBS so is quite minimal. Manually installs SQL script.

**watch**

File used for automated checking of new upstream release of filesender.

## RPM

### **rpm/filesender-config.php**

Replacement config of filesender.

### **rpm/filesender.htaccess**

htaccess file used to configure apache.

### **rpm/filesender.spec**

Spec file, contains all required settings for building a RPM file.
