

## Upgrade notes

<p><span style="font-size: 100%;">This page outlines the upgrade notes for the FileSender </span><b style="font-size: 100%;">1.6 release</b></p><h2>Upgrading to FileSender 1.6</h2>

upgrade notes document upgrading from version 1.5 to version 1.6. If you are currently running an older version please consult the [Upgrade notes for the 1.5 release](#)

## What changed?

- **New: high-speed upload module 'TeraSender' (#891)**
- **New: auto-complete in the To: field (#821)**
- **New: refactored MyFiles, file downloaded dates provide audit trail when download Cc:s switched off**
- New: support for configurable footer via language file (#871)
- New: support for optional Subject and Message in guest use voucher (#637, #774)
- New: support for multiple From: addresses from authentication source (#184)
- New: configurable option 'download\_confirmation\_to\_downloader' for sending download email receipt to file recipients (default 'true') (#985)
- New: download pause/resume now possible with browsers supporting partial download (most notably Firefox, IE11, curl and wget) (#1076)
- New: support for SQLite (#898)
- New language: Finnish (#981)
- Change: logout.php is now called in the same way as all other pages, practical for header/footer. **Change your site\_logouturl! (#904)**
- **Change: Upgrade JQuery and JQueryUI to 1.10.2, Upgrade Smoothness to 1.10.2. (#819)**
- Fix: non-HTML5 uploads with a single quote in filename fail (#895)
- Fix: saml\_uid\_attribute used in fileuid field (breaks with large uid\_attribute values) (#884)
- Fix: prevent logfile pollution by detecting bad requests before switching to https (#970)

## The upgrade process summarized

You can use the **same database** and **file store you used** for the previous FileSender version. The 1.6 release requires no database changes. Nevertheless a database backup is a good measure before doing an upgrade.

What you'll need to do to upgrade is:

1. backup your database
2. backup your filesender installation, especially if you've made local modifications to pages or code
3. install the 1.6 code from packages or by unpacking the tarball
4. create a fresh configuration file with sane defaults from the config/config-dist.php template
5. make local modifications, pay special attention to changed config file directive semantics, and the help and about

## Upgrade your database definitions

No database changes from 1.5 to 1.6

## Avoid surprises and start with a fresh configuration file

New configuration directives have been added, others deprecated and at least one changed semantics. Avoid surprises and start with a fresh configuration file. **Copy config/config-dist.php to config/config.php. This will ensure you start with sane defaults.**

## Configuration file changes you need to be aware of

Check the [Administrator Reference Guide](#) for details about the individual directives.

### New:

```
// autocomplete in To: field
$config["autocomplete"] = true; (if not present, autocomplete is switched off)
$config["autocompleteHistoryMax"] = ""; // "" - unlimited or integer, number of results displayed to user in autocomplete list

// new high speed upload module 'terasender'
$config['terasender'] = false; // true/false - terasender upload module on/off
$config['terasenderadvanced'] = false; // true/false - terasender advanced - show advanced settings
$config['terasender_chunksize'] = 5; // default (5) terasender chunk size in Mb
$config['terasender_workerCount'] = 6; // default (6) webworker count
$config['terasender_jobsPerWorker'] = 1; // default (1) jobs per worker

$config["cron_cleanupdays"] = 7; // Use cron job to cleanup temp folder for terasender chunks configured number of days

// configurable default subject for voucher email
$config['voucherissuedemailsubject'] = 'Voucher';

// send copy of download confirmation to downloader (true/false, default true)
```

`$config['download_confirmation_to_downloader'] = true;` (you probably want to change this to false, we defaulted it to true to ensure your site doesn't change behaviour all of a sudden)

## Changed:

`$config['site_logouturl']` changed, the logout page is now generated in the same way as all other pages.

**If you don't apply this change your logout page will be broken**

old: `$config['site_logouturl'] = $config['site_url'] . 'logout.php';`  
new: **`$config['site_logouturl'] = $config['site_url'] . '?s=logout';`**

`$config['voucherissuedemailbody']` email template has been changed to incorporate an optional personal message

## Moved from config.php to language files:

none

## New labels in language files:

```
// Footer to display
$lang["SITE_FOOTER"] = "";
Example: $lang[SITE_FOOTER]='Version '.FileSender_Version::VERSION;
```

```
// New items for My Files
$lang["DOWNLOADED"] = "Downloaded";
$lang["SHOW_ALL"] = "Show/Hide Details";
$lang["DETAILS"] = "Details";
```

```
// Terasender Advanced Settings
$lang["TERA_ADVANCED_SETTINGS"] = "Advanced Settings";
$lang["TERA_CHUNKSIZE"] = "Chunksize (MB)";
$lang["TERA_WORKER_COUNT"] = "Worker count";
$lang["_TERA_JOBS_PER_WORKER"] = "Jobs per workers";
```

## Deprecated:

none

## Obsoleted:

`$config['site_downloadurl']` has not been used since beta 0.1.15 but was wrongly labeled as deprecated. Now removed from config file
