Technical design - SQL

Version 2, last updated by [gijzelarr](#) at 2010-11-09

SQL

scripts/filesender_db.sql

Description: This file is used to populate a database.

The script creates 2 tables, *files* and *logs*. *files* is used to store information about uploaded files. The *logs* table is used for storing all events.

There are also 2 sequences, *log_id_seq* and *download_id_seq*. *download_id_seq* is unused, *log_id_seq* is used for

the auto incrementation of a new *logid*. This can be replaced by the 'serial' field in future versions.

files	
fileto	CHARACTER VARYING(250)
filesobject	CHARACTER VARYING(250)
filevoucheruid	CHARACTER VARYING(60)
filemessage	TEXT
filefrom	CHARACTER VARYING(250)
