Release 1-5-rc1

Version 3, last updated by xjansen at 2012-10-22

```
<h2>Release Version 1.5-rc1</h2><div>
```

Release date: 22 October 2012

Distribution file	MD5	SHA1
filesender-	a0fe32333c3a821aa7eebb5857685b1f	5efe47308c6b8109139969080e798e8bbf1154ff

1.5-rc1.tar.gz

filesender-1.5-rc1.zip ebb9228e4ff4a31e49eb07ab8bab1c06 3d79c18cd9c04e8895c8372727030e0ce8dec099

Release 1.5-rc1 is also available in the [Debian](#) and [RPM](#) package repositories and the [Subversion repository](#).  
Currently Release 1.5-rc1 is distributed from the **unstable** repositories.

## Installation

Documentation for this release candidate is not finished yet but is largely the same as for the previous releases. Exceptions are documented in [Installation notes for 1-5 development code](#). This release candidate has been thoroughly tested and will be field tested on three production installs before the final release.

## Upgrade Notes

See [Installation notes for 1-5 development code](#) for important upgrade and installation notes.

## Changes since release 1.5-beta4

- \* Changes since 1.5-beta4
  - Update of default Help text (English, Dutch, Norwegian) ([#650](#), [#651](#))
  - Updated language definitions
  - Fixed links to caniuse.com (all languages)
  - Disable Send button after first press ([#805](#), [#811](#), [#812](#))
  - Do not mark Guest Voucher as used when upload fails ([#807](#))
  - Prevent erroneous showing of DatePicker in recent Chrome versions ([#823](#))
  - Debug setting set to false in config-dist.php ([#804](#))
  - Only log user information when debug is true ([#808](#))
  - Fixes in error logging ([#806](#))
  - Remove dependency on php-gmp ([#813](#))
  - Fixed include files in emailbouncehandler.php
  - Various small changes and bug fixes ([#709](#), [#794](#), [#809](#), [#810](#), [#828](#))

## Changes since release 1.5-beta3

- \* Changes since 1.5-beta3
  - Security: make admin check more strict ([#751](#))
  - Security: Fixed reset of session cookie when switching to HTTPS ([#757](#))
  - Security: Fixed 2 potential XSS vulnerabilities ([#754](#))
  - Security: always prevent caching of sensitive pages ([#762](#))
  - Security: add XSRF checks for POSTs and additional auth-checks for GETs ([#753](#))
  - Security: add additional recommended PHP settings ([#758](#))
  - Fixes and improvements in language selection ([#662](#), [#745](#))
  - Updated language definitions
  - Disabled HTML5 capability for Opera ([#527](#))
  - Improvements on handling and reporting of missing required SAML attributes ([#628](#))
  - Bugfixes in mail error-handling ([#713](#))
  - Improved Help text (en\_AU only) ([#650](#), [#651](#))
  - Removed HTML5URL configuration setting (merged into Help text) ([#744](#))
  - Various small bug fixes ([#691](#), [#731](#), [#742](#), [#794](#))

## Changes since release 1.5-beta2

- \* Changes since 1.5-beta2
  - HTML5 upload support for the upcoming FireFox 13.
  - Improvements in the User Interface.
  - Improved user feedback and error reporting
  - Improved server side logging.
  - Various small bug fixes and enhancements.
- \* Changed features:
  - Option to securely wipe (shred) expired files in the daily cron job.
  - Separate text definitions for 'login' button and title of the landing page.
  - The configured 'Site Name' is now used on the landing page

## Changes since release 1.5-beta1

\* Major changes since 1.5-beta1

- The `/config` directory as distributed now only contains a sample `config-dist.php` file. All other templates/sample files have been moved to `/config-templates` or their contents have been merged into the `/language/*` files.
- The supplied `config-dist.php` has been cleaned up and contains some important changes. It is recommended to create a fresh `config.php` from the supplied `config-dist.php` file and adapt that one with your local settings.
- Two database column type changes (needs manual adjustment when upgrading).
- Changed and consolidated language file naming scheme.
- Added Czech, Slovenian, Italian, Spanish, Croatian and Hungarian language files.
- Updated Dutch and Norwegian language files.

\* Major (less visible) changes since 1.5-beta1

- Further improvements in workflow, validation/error handling and input/output pathways.
- Minor bug fixes and enhancements.

## Changes since 1.1 RELEASE

\* Major changes since 1.1/1.0.1

- Replaced Flash User Interface with a HTML-only interface
- Dropped Gears dependency, upload of large (>2G) files now requires a modern HTML5 capable browser, other browsers are limited to 2G uploads (using a small Flash-application).
- Added automatic language selection (English, Norwegian, Dutch)
- Added Database Abstraction Layer (PDO) to facilitate the use of MySQL and possibly other databases as backend.

\* Major (visible) changes since earlier 1.5.0 development builds

- Added French and German languages (contributed by RESTENA)
- Replaced MDB2 with PDO DB Abstraction Layer

\* Major (less visible) changes since earlier development builds

- Input/output pathways have been simplified
- Input/output sanitisation and validation is done
- Much code and program flow has been cleaned up and simplified
- We now use mostly prepared statements for database interaction
- All pages are now W3C compliant

## Known issues

This is the first release candidate for 1.5. During this rc1 phase we'll run the code on a few production installs to verify production readiness and will update the documentation accordingly. No code changes are planned. See [http://www.assembla.com/spaces/file\\_sender/tickets](http://www.assembla.com/spaces/file_sender/tickets) for a current list of issues.

## Support and Feedback

See [Support and Mailinglists](#) and [Feature requests](#).

Comments are disabled for this space. In order to enable comments, Messages tool must be added to project. You can add Messages tool from [Tools section on the Admin tab](#).
