Release 2-0-alpha1

Version 1, last updated by [meijer](#) at 2016-02-26

Release Version 2.0-alpha1

This document is a work in progress. While this announcement remains on top we have not yet formally issued an alpha release.

Release date: x 2016

Distribution

Release 2.0-alpha1 is available via SVN as per our Alpha release policy. ([link!!](#))

The 2.0-alpha1 branche is: https://www.assembla.com/spaces/file_sender/subversion/source/HEAD/filesender/branches/filesender-2.0

Code in this branche is considered to be 2.0-alpha1 as of revision X

Installation

Documentation is available at [Documentation v2-0](#).

Upgrade Notes

Version 2.0 breaks compatibility with version 1.x. We recommend to There are currently no detailed upgrade notes for version 2.0 available.

Security audits

The 2.0-alpha1 code has been put through two separate external code security audits between January and April 2015: * One initiated by the project and executed by Pine Security * One initiated by French NREN RENATER which included a review of their operational environment.

Few issues surfaced and they have where relevant been addressed.

Major changes since release 1.6

Version 2.0 is a new baseline release. Much of the code base was rewritten, a new database design adopted, many configuration directives have been added and existing directives changed. Please note version 2.0 does not contain the crypto functionality found in version 1.7-beta1. We expect to put this on the roadmap after the 2.0 production release.

Many new features have been added. Check the [Features](#) page for details of the draft feature list for version 2.0.

A summary:

- Added Multi-file transfer support with drag & drop file selection
- Added Fine-grained email receipt control
- Added Per transfer audit report
- Removed Flash dependency for uploads with legacy browsers without HTML5 FileAPI support. The per-file limit with legacy browsers is 2GB.
- Improved TeraSender upload module
- Added a RESTfull webservice API
- Reduced the privacy footprint
- Added Shibboleth authentication library support
- New database design
- Database initialisation scripts for MySQL and PostgreSQL

Known issues

- Release 2.0-alpha1 has not undergone any structured client-side workflow testing!
- While nearly all configuration directives have been documented and put through basic testing, the administration manual detailing how to for example implement email bounce handling or tweaking the layout is largely absent.
- The TeraSender upload module works and has been put through some basic tests including a number of uploads of 200 GB. We are not entirely satisfied yet with its stability and you may encounter issues.
- We are not aware of any major issues. Visit the [open ticket list](#) for an overview of currently open issues.
