risk assessment for filesender project

This risk assessment covers the FileSender project not the filesender software.

L: likelyhood (1 (low) - 4 (high)

C: consequence rating (1 (low) - 4 (high)

R: risk rating

Project infrastructure

Risk	L	Consequence	C	Prevention	Plan B	R
assembla becomes permanently unavaible	1		4	off-site copy of svn tree, assembla backup	It will take a couple of months tops to get someting else up and running. We then need to hire someone to do a "as good as possible" import of tickets and wiki.	
rogue assembla user deletes (chunks of) space						
rogue user inserts security holes in code				svn commit, tree management
