```
Release Version 1.5-beta2

Release date: 25 April 2012

Distribution file	MD5	SHA1
filesender-	d168d9ebe33140613f7ca943bd6bf05d	2566ea5fc8f376f7d0f35f380e3961950b899b34

1.5-beta2.tar.gz		
filesender-1.5-beta2.zip	cd4caefd920e3dd318f0a096556fa5ec	ef54e12554373eb3a511122adc03ec0125b4aa83

Release 1.5-beta2 is also available in the Debian and RPM package repositories and the Subversion repository.
Currently Release 1.5-beta2 is distributed from the **unstable** repositories.

Installation

Documentation for this beta release is not finished yet but is largely the same as for the previous releases.
Exceptions are documented in Installation notes for 1-5 development code. Note that although we have thoroughly tested this beta2 release it is not yet intended for production use.

Upgrade Notes

See Installation notes for 1-5 development code for important upgrade and installation notes.

Changes since release 1.5-beta1

* Major changes since 1.5-beta1
  - The ./config directory as distributed now only contains a sample
    config-dist.php file. All other templates/sample files have been
    moved to ./config-templates or their contents have been merged
    into the ./language/* files.

  - The supplied config-dist.php has been cleaned up and contains some
    important changes. It is recommended to create an fresh config.php
    from the supplied config-dist.php file and adapt that one with your
    local settings.
  - Two database column type changes (needs manual adjustment when
    upgrading).
  - Changed and consolidated language file naming scheme.
  - Added Czech, Slovenian, Italian, Spanish, Croatian and Hungarian
    language files.
  - Added Czech and Slovenian language files.
  - Updated Dutch and Norwegian language files.

* Major (less visible) changes since 1.5-beta1
  - Further improvements in workflow, validation/error handling and
    input/output pathways.
  - Minor bug fixes and enhancements.

Changes since 1.1 RELEASE

* Major changes since 1.1/1.0.1

  - Replaced Flash User Interface with a HTML-only interface
  - Dropped Gears dependency, upload of large (>2G) files now requires
    a modern HTML5 capable browser, other browsers are limited to 2G
    uploads (using a small Flash-application).
  - Added automatic language selection (English, Norwegian, Dutch)
  - Added Database Abstraction Layer (PDO) to facilitate the use
    of MySQL and possibly other databases as backend.

* Major (visible) changes since earlier 1.5.0 development builds
  - Added French and German languages (contributed by RESTENA)
  - Replaced MDB2 with PDO DB Abstraction Layer

* Major (less visible) changes since earlier development builds
  - Input/output pathways have been simplified
  - Input/output sanitisation and validation is done
  - Much code and program flow has been cleaned up and simplified
  - We now use mostly prepared statements for database interaction
  - All pages are now W3C compliant

Known issues

This is the second beta for 1.5 and there are still some issues to be tackled in the next beta3 cycle. See
http://www.assembla.com/spaces/file_sender/tickets for a current list of issues.

Support and Feedback

See Support and Mailinglists and Feature requests .
