## Database 2-0 Tables

Version 4, last updated by romanmalyshev at 2014-07-30

```
   <p> <span style="color: rgb(17, 17, 17); font-family: inherit; font-size: 16p
x; font-weight: bold; line-height: 18px;">Exact details per table</span></p><p><span
style="color: rgb(17, 17, 17); font-family: inherit; font-size: 16px; font-weight: b
old; line-height: 18px;"><br></span></p><h3 style="font-family: Arial, Helvetica, 'L
iberation Sans', FreeSans, sans-serif;">Tables directly needed for file transfer</h3
><div><table style="width: 1084px;"><tbody><tr><td colspan="3"><h4>table: transfers<
/h4></td></tr><tr><td>Field name</td><td>Data type</td><td>Description</td></tr><tr>
<td>id<br></td><td>integer</td><td>Primary key. Not null and auto-incrementing</td><
/tr><tr><td>trackingid</td><td>character varying(10)<span>    </span>
</td><td>Tracking code for the transfer (sent to sender)<br>Maybe not that useful</t
d></tr><tr><td>uid</td><td>character varying(500)</td><td>The sender's user ID, as g
enerated by the IdP</td></tr><tr><td>sendername</td><td>character varying(250)</td><
td>The sender's name</td></tr><tr><td>subject</td><td>character varying(80)</td><td>
Optional: specifies subject in the e-mail notification sent to receivers</td></tr><t
r><td>message</td><td>character varying(250)</td><td>Optional: message from sender t
o receivers</td></tr><tr><td>transfer_date</td><td>timestamp without time zone</td><
td>The date and time of the transaction</td></tr><tr><td>expiry_date</td><td>timesta
mp without time zone</td><td>The expiration date and time (to insure that download i
s available on the last day)</td></tr><tr><td>status</td><td>character varying(20)</
td><td>Indicates status of the file transfer: uploading, available for download, exp
ired</td></tr><tr><td>options</td><td>character varying(250)</td><td>text string, JS
ON-encoded, that contains data about what options were checked</td></tr></tbody></ta
ble></div><div><div><br></div><div><br class="Apple-interchange-newline"><table styl
e="width: 991px;"><tbody><tr><td colspan="3"><h4>table: files</h4></td></tr><tr><td>
Field name</td><td>Data type</td><td>Description</td></tr><tr><td>id</td><td>integer
</td><td>Primary key. Not null and auto-incremented.</td></tr><tr><td>transferid</td
><td>integer</td><td>Foreign key. Not null. The ID handle of the transaction record
the file is associated with.</td></tr><tr><td>name</td><td>character varying(500)</t
d><td>Name of the file, as originally specified by sender.</td></tr><tr><td>size</td
><td>bigint (long integer)</td><td>File size in bytes.</td></tr><tr><td>sha1</td><td
>character varying(500)</td><td>Hash code (for file integrity verification). Should
be done per chunk. But leaving it as it is for now.</td></tr></tbody></table></div><
/div><div><br></div><div><br></div><div><br class="Apple-interchange-newline"><table
